

Ebalin is a medication used to treat epilepsy, neuropathic pain, and fibromyalgia.

Composition: Each capsule contains Pregabalin 150mg

Pharmacological Group: Anticonvulsant

Indications:

- Management of neuropathic pain associated with diabetic peripheral neuropathy
- Management of post herpetic neuralgia
- Adjunctive therapy for adult patients with partial onset seizures
- Management of fibromyalgia
- Management of neuropathic pain associated with spinal cord injury

Mechanism of Action

Pregabalin binds with high affinity to the alpha2-delta site (an auxiliary subunit of voltage-gated calcium channels) in central nervous system tissues.

Pharmacokinetics

Pregabalin is well absorbed after oral administration, is eliminated largely by renal excretion, and has an elimination half-life of about 6 hours.

Proposed Route of Administration: Oral (Capsule)

Proposed Dosage:

Pregabalin may be taken with or without food. The initial dose for neuropathic pain associated with diabetic peripheral neuropathy is 50 mg three times a day (150 mg/day). For other indication use as directed by qualified physician.

Proposed Storage Conditions: Store below 25°C in a dry and cool place. Protect from heat, light and moisture.

Pack Size: 14's capsules
